

EEAP Conference 2019

Experiences of evaluating Energy transition policies in Europe

30.10.2019

Presented by: Chun Xia-Bauer

Johannes Thema, Felix Suerkemper, Florin Vondung, Thomas Götz

Wuppertal Institute for Climate, Environment and Energy

➤ Ex-post evaluations

- Example : Programme for heating optimization through efficient pumps and hydraulic balancing in Germany

➤ Ex-ante evaluations

- Examples from the EU: Ecodesign Directive

➤ Multiple impacts

- Ex-ante assessment
- Ex-post assessment

Ex-post evaluation

Example : Programme for heating optimization through efficient pumps and hydraulic balancing in Germany (I)

- **Programme duration:** 2016-2020
- **Target:** Incentivize replacement of old heating system circulators and warm water circulation pumps with highly efficient pumps and hydraulic optimization of heating systems
- **Subsidy level:** 30% of the net investment costs
- **Target groups:** Private owners, companies, self-employed, municipal bodies, legal persons under private law
- **Funding:** German Federal Ministry for Economic Affairs and Energy

Legal requirement to evaluate public subsidy programmes

→ Wuppertal Institut and Arepo Consult carry out programme evaluation (formative and summative ex-post evaluation)

Ex-post evaluation

Example 1: Programme for heating optimization through efficient pumps and hydraulic balancing in Germany (II)

Evaluation Approach

- First step: development of programme theory to
 - understand causal chains and impacts and
 - identify suitable indicators and guide data collection
- Ex-post evaluation using engineering estimates and programme statistics to assess target achievement, effectiveness, cost-effectiveness
- Evaluation supported by market analysis, stakeholder interviews and participant survey
- Continuous formulation of recommendations for programme improvement

Simplified causal chain guiding the evaluation design

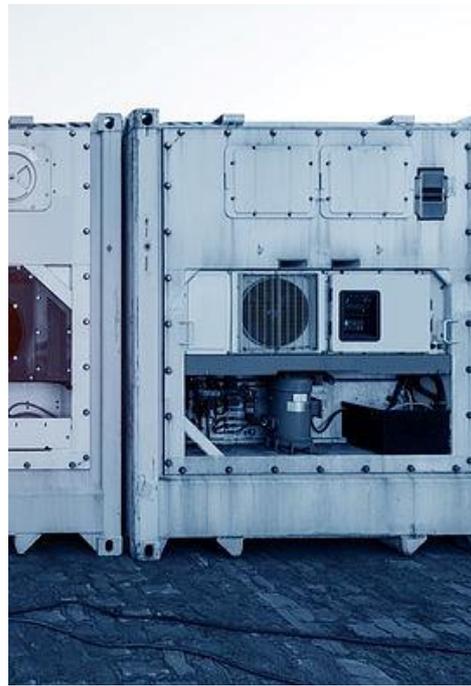

Ex-ante evaluation

Example: Ecodesign Directive

Ecodesign directive: provides consistent EU-wide rules for improving the environmental performance of products, sets out minimum mandatory requirements for the energy efficiency of these products. => 2019 extended to include **energy-related products (ErP)**

Example Ecodesign studies (with involvement by Wuppertal Institute):

- Smart appliances, Refrigerated containers, Local space heating products, Solid fuel small combustion installations, Thermal insulation in buildings, Household Refrigerators & Freezers, Networked standby losses of energy using products, etc.

Methodology for Ecodesign of Energy-related products (MEErP) 2011: allow *ex-ante evaluating* whether and to which extent various energy-related products fulfil certain criteria according the Ecodesign Directive.

- Task 1 – Scope (preliminary product definitions, identifying standards and legislation);
- Task 2 – Markets (market stock and trend, consumer expenditure for LCC);
- Task 3 – Users (Barriers to possible Ecodesign measures, user parameters influence the environmental impact);
- Task 4 – Technologies (features of existing products, BAT, BNAT);
- Task 5 – Environment & Economics (Base case LCA & LCC);
- Task 6 – Design options;
- Task 7 – Scenarios Modelling (policies, scenarios, impact assessment)

stakeholder involvement!

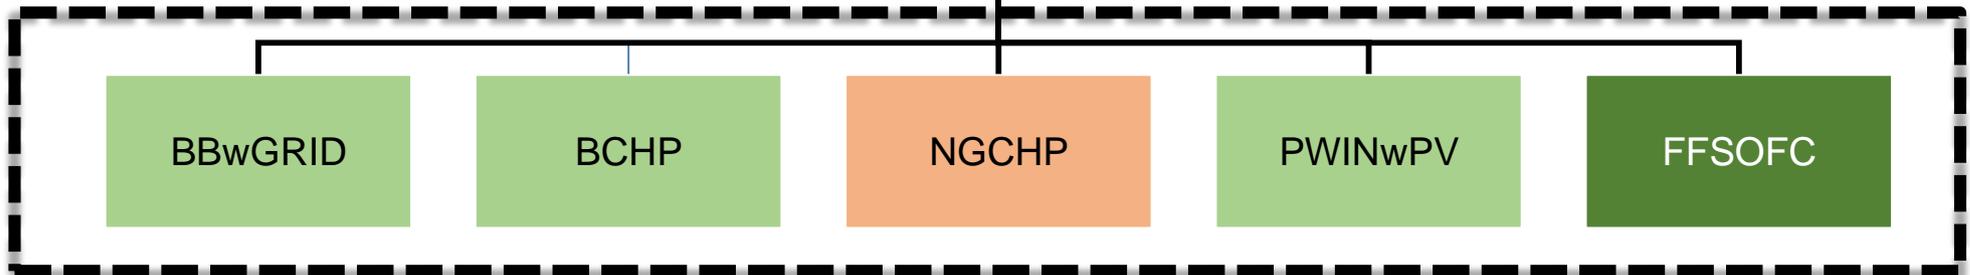

<https://ec.europa.eu/docsroom/documents/26525>

e.g. Task 7 - Example for ex-ante impact assessment / scenario analysis

→ Scheme of the WIKUE dynamic stock model used for Impact Assessments (simplified)

Different technology options to be compared*

Example: COMBI project

COMBI aimed at quantifying the **multiple non-energy benefits of energy efficiency** (building, transport and industry) in the EU-28 area and incorporate those multiple impacts into decision-support frameworks for policy-making

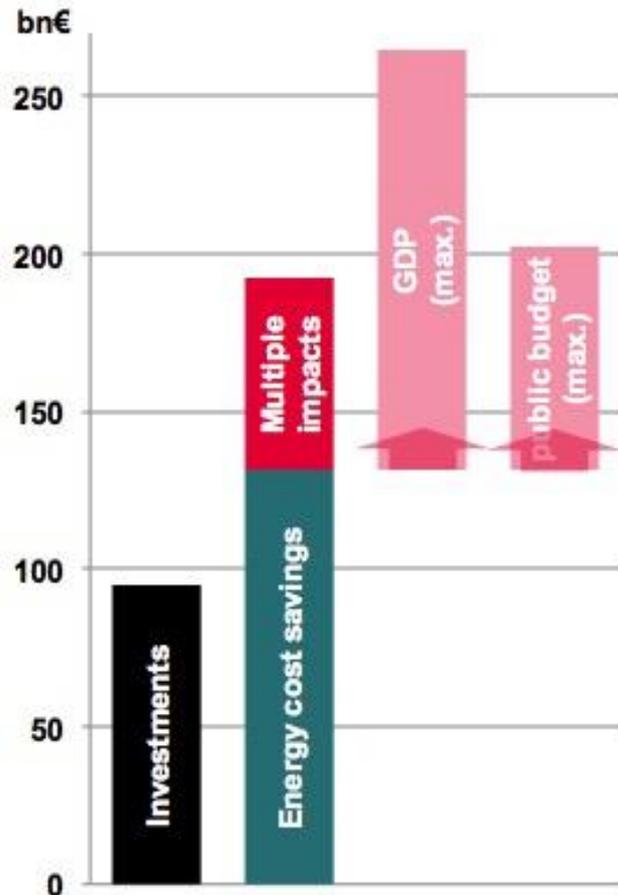

Ex-ante assessment multiple impacts

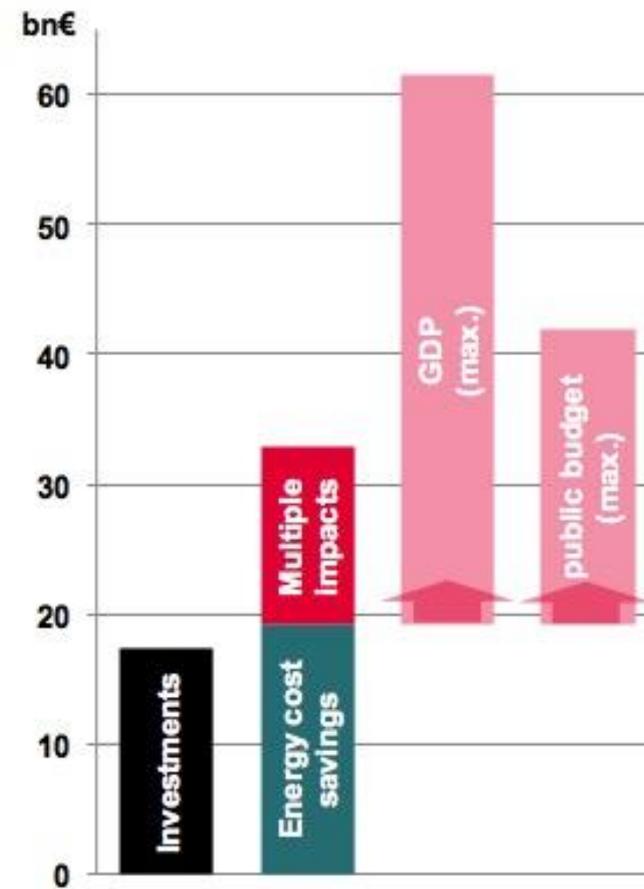

Example: COMBI – key results (EU-wide figures)

Investments, energy cost savings and multiple impacts (bn€ annual in 2030)

All COMBI actions a)

Residential building refurbishment

COMBI online tool
Calculating and Operationalising
the Multiple Benefits of
Energy Efficiency in Europe

combi-project.eu/tool

a) all EEI actions except modal shifts which cannot be included to CBA due to no availability of infrastructure investment costs and trucks due to unreliability of out-dated investment costs

Ex-ante assessment multiple impacts

Example: COMBI – key results (EU-wide figures)

- Bringing all quantifiable multiple impacts together in **one unified database**
- Many impacts **could not, or not comprehensively, be quantified** due to insufficient data and evidence
- While COMBI covers the sectors of building, transport and industry, they are **not covered in all possible detail**.
- Almost half of monetised impacts have **potential overlaps** with other impacts=> **Exclusion**
- Input data based on the state of knowledge and latest available data on energy efficiency improvement (EEI) actions, **NOT including technology development and costs reduction**

a) all EEI actions except modal shifts which cannot be included to CBA due to no availability of infrastructure investment costs and trucks due to unreliability of out-dated investment costs

Thank You
For Your Attention

Ex-ante assessment multiple impacts

Example: COMBI – key results (EU-wide figures)

#	End-use energy efficiency action – improving energy efficiency in or through:
Action 1	residential refurbishment of the building shell + space heating + ventilation + space cooling (air-conditioning)
Action 2	residential new dwellings
Action 3	residential lighting (all dwellings);
Action 4	residential cold appliances (all dwellings);
Action 5	non-residential refurbishment of building shell + space heating + ventilation + space cooling (air-conditioning)
Action 6	non-residential new buildings
Action 7	non-residential lighting (all buildings)
Action 8	non-residential product cooling (all buildings)
Action 9	passenger transport – modal shift
Action 10	passenger transport – motorized two-wheelers
Action 11	passenger transport – cars
Action 12	passenger transport – public road/buses
Action 13	freight transport – modal shift
Action 14	freight transport – light duty trucks (LDT)
Action 15	freight transport – heavy duty trucks (HDT)
Action 16	industry (7 sectors) - high temperature process heating
Action 17	industry (7 sectors) - low and medium temperature process heating
Action 18	industry (7 sectors) – process cooling
Action 19	industry (7 sectors) – specific process electricity
Action 20	industry (7 sectors) – motor drives
Action 21	industry (7 sectors) – HVAC in industrial buildings

a) all EEI actions except modal shifts which cannot be included to CBA due to no availability of infrastructure investment costs and trucks due to unreliability of out-dated investment costs
